**Importance:** High

Good Afternoon:

Attached are the preliminary radon results for the NY Stone Building. Also attached are my contractor notes and sketches. This is not a final report and there will be polished diagrams in the final report. As expected, radon levels are above the 4.0 pCi/L action level. The second floor readings were actually higher than the ground floor. This could be contributed to the fact that windows, doors and bay doors were opened throughout the normal business of the day..in turn diluting the radon gas levels on the ground floor. **Can you please send your radon sampling results for our records?**

As our draft data products are developed, we will submit them to you for your review.

We will need to drop/pickup radon canister samples again once the radon mitigation system is installed and running. Please keep us posted.

Thanks

**Subject:** USEPA Assessment at 105 Kisco Avenue: The Stagg Group

Good Morning:

### **105 Kisco Avenue Property**

Our preliminary gamma survey data shows very little areas inside the buildings above background (Good news). We did find higher radon readings with our radon survey instrument (RAD7). That would be expected since the Stagg Group sampled previously and obtained laboratory readings above 4.0 pCi/L. By the way, could you please share your radon sampling data? Any additional data is beneficial. Our radon samples were taken after some of the concrete was taken up in the Southeast corner of the main area. The radon cartridges we

deployed on Monday will be picked up this afternoon. We have a few identified spots inside the main area to survey with the Rad7 and the RSS-131 HPIC this morning and then we will be finished the surveying inside the building.

Yesterday we used the GeoProbe to pull two soil samples on your property and one just outside of the Southeast corner of your property (Near the telephone pole).

As indicated previously, we will give you real time survey info as we obtain it but we will need to wait for laboratory results for the radon canisters and the soil samples.

We appreciate all your assistance in this assessment.

**Subject:** USEPA Assessment at 105 Kisco Avenue, Mount Kisco, New York

Good Evening:

It was nice to meet you, Jay and Tom as well. All the radon canisters were deployed in the two lumber storage buildings and the main showroom building. The gross gamma scoping survey with the Ludlum 2241 was completed in the two lumber storage buildings and the majority of the main showroom building first floor. The PIC survey was completed in the two lumber storage buildings. We also conducted several Rad7 runs (radon/thoron). The preliminary results indicate that there are no significant levels of gamma radiation in the areas surveyed so far. We did see elevated levels of radon in the main building which would support your findings. We still need to conduct the PIC survey in the main building as well as more Rad7 survey runs in the main building.

We will be at the site around 7:30 AM tomorrow. We do need to meet up with MTA first thing in the morning but we will be conducting simultaneous activities at your building.

Thanks again for your assistance. Have a good night.

Eric,

Nice meeting you earlier today. Were you and Dan able to set up the radon canisters and get initial gamma readings in the large building and the two lumber storage facilities? Also, will you be working on the other properties, 103 Kisco and the MTA site, tomorrow?

Thanks.

Brian

We are shooting for 830 AM arrival time at the site.

- Initial Health and Safety meeting
- Introductions
- OSCs site walk with property representatives/tenants while background readings obtained by contractors
- Refine work plan and Health and Safety plan
- Begin assessment work

Good Afternoon:

Our contractor and the GeoProbe subcontractor are working on the utility mark outs for the whole site (Three properties). Our locations for the soil boring samples will be dependent on the mark outs and your feedback. Meaning, we have soil sample points from our Pre-Remedial Program on other parts of your property. We wanted to supplement that sampling with a few other locations. So exact locations of the soil borings will be determined next week. reviewing all available information in conjunction with Stagg Group/tenant recommendations.

Thanks

**Subject:** USEPA Assessment at 105/107 Kisco Avenue, Mount Kisco, New York

**Importance:** High

Good Evening:

I wanted to reach out to the group and ensure we are all on the same page. Our assessment team will arrive at your property on August 3<sup>rd</sup>. We will be at the site (105/107 Kisco Avenue, 103 Kisco Avenue and the MTA property area) until Friday, August 7<sup>th</sup>. Some of the assessment activities can be planned specifically and some will have to be determined when we are at the site working with the property owners and the tenants. We want to maximize our resources/time while we minimize the inconvenience to you and your tenants.

Planned Tasks to be performed:

- Radon Charcoal Canister Sampling

o The radon canister sampling will be conducted within the interior spaces of the buildings on your property either Monday or Tuesday. Meaning the canisters will be dropped off on one of those days. Therefore, the canisters will be picked up on either Thursday or Friday depending on the drop off date. Those are the days we have the radon specialist subcontracted. I see that Thomas mentions a radon mitigation system. I can only assume that you have conducted your own radon sampling in the building and you are planning a remedy. **Do you have a schedule for this installation?** We would like to have our sampling conducted under the current conditions to also have "before" data.

· Radon/Thoron Survey

o The RAD7 Instrument is a survey instrument that detects radon and thoron

o We can use this instrument in different modes

§ Sniff mode is a short survey that will give us an idea if there are any increased levels of radon and thoron

§ If we see a sign of increased readings, we can put this instrument into survey mode and capture a longer survey results

§ We base our locations for this survey on the gamma scoping survey.

· Gamma Survey

o We will measure and grid out the ground floor of all the interior space of the buildings.

o We will be using three instruments to survey gamma radiation; the Ludlum 2241, Fluke Pressurized Ionization Chamber (PIC) and the Reuter Stokes 131 PIC (RSS-131).

§ The Ludlum 2241 is used to perform a gross scoping gamma survey of the area with readings on contact (about an inch from the ground). This is performed quickly and the gamma range will be given for a specific area. Any elevated gamma readings will assist us in survey/sampling with other techniques.

§ The Fluke PIC is used to delineate the gamma readings throughout the mapped out grid of the ground floor. Measurements will be taken at specific intervals at both the contact and waist (approximately 3 feet from the ground) levels.

§ Reuter Stokes 131 PIC (RSS-131) is a stationary PIC that accurately reads low level gamma. This instrument will be used in higher gamma areas identified by the other gamma instruments.

· Geo Probe Soil Sampling

o We will be collecting a few Geo Probe four feet deep soil samples. These samples will be sent to a laboratory for analysis. We will be concentrating on areas not addressed by our Pre-Remedial Program.

All of the survey and sampling will assist us in making any removal action decisions.

Please let me know if you have any questions or concerns. I believe we are set with access agreements. If that is not the case, please let me know what needs to be taken care of. Please feel free to pass onto your tenants. I will speak with anyone who needs to discuss the assessment activities. Dan is out of state at a training session. We are in contact but I am more accessible this week. Both Dan and I will be at the site next week.

Thanks for your cooperation.

Regards,

Eric

**Subject:** Access to 107 Kisco Avenue, Mount Kisco, New York

Dear Mr. Stagg, EPA requests access from you (or any appropriately authorized individual) to your property located at 107 Kisco Ave in Mount Kisco, New York. Access is requested for non-invasive sampling activities that EPA would like to commence during the week of July 20<sup>th</sup>. If you have questions about the nature of the sampling activities we can set up a call to discuss. I appreciate that this is not a lot of advance notice, but we have availability and feel that the sampling activities will not be disruptive to the current uses of the property.

Attached is a simple consent for access form. Please review this and advise me if you are willing to provide access. I can be reached by reply email or at 212 637-3165.
